Education

University of North Carolina Wilmington
B.S. Software Engineering
Minors: Computer Science & Spanish

May 2026
GPA: 3.6

Outstanding Graduate of Software Engineering, Spring 2026 | First graduate of the Software Engineering Program

Skills

- Programming Languages: Python, Java, JavaScript, TypeScript, HTML, CSS, PHP
- Frameworks/ Tools: Git, Vue.js, React, Figma, VSCode, IntelliJ IDEA, Bruno, Azure Devops, Claude, Copilot
- Concepts: OOP, Data Structures & Algorithms, Software Development Life Cycle, Agile/Scrum

Relevant Experience

Junior Software Engineer, MetLife | Java, Bruno, Azure Devops, Git June 2026 – Present

- Configured and maintained IBM OpenPages, and enterprise governance, risk, and compliance platform, including workflows, user groups, security rules, and troubleshooting production incidents for business stakeholders.
- Implemented business requirements within agile sprints across development, QA, and production environments, resolving UAT defects and supporting monthly releases to ensure seamless production deployments.

Software Engineering Fellowship, Kittelson & Associates | TypeScript, React, Figma February 2026 – May 2026

- Led the development of a high-impact Safety Module for the wzKIT™ platform, designing data-driven workflows to track and visualize work zone crash rates, severity, and worker involved safety incidents.
- Collaborated in bi-weekly agile sprints to deliver production-ready features, utilizing React and TypeScript to automate PDF reporting and implement analytical modules that quantify risk for road users and workers.

Undergraduate Teaching Assistant, UNCW CSC Department | Python January 2025 – May 2026

- Reviewed and debugged Python assignments for ~200 students across Intro to Computer Science and Data Structures courses, providing constructive feedback, code suggestions, and guidance to improve coding skills.
- Collaborated with the faculty to design automated tests for assignment evaluation, streamlining the grading pipeline and ensuring consistent, prompt feedback for delivery of a high-quality course for students.

Research Assistant, UNCW CSC Department | Typescript, Python, Java June – August 2025

- Evaluated security of LLM-generated code by engineering prompts for ChatGPT and Mistral, identifying vulnerabilities including SQL injection, XSS, and data exposure in AI-assisted development workflows.

Projects

Apache Grails Open-Source Contributor | Groovy, Java, Gradle, Git, GitHub Actions March 2026

- Engineered a centralized CI/CD reporting system by configuring Gradle tasks and GitHub Actions to parse XML static analysis results, publishing error summaries directly to job outputs for faster debugging.
- Resolved framework documentation and build inconsistencies by implementing exclusion logic in Gradle sync tasks and addressing community-reported issues to ensure reliability of the official Grails user guide.

Portfolio Website | TypeScript, React, HTML/CSS, EmailJS, GA4, i18Next December 2025 – January 2026

- Developed a responsive, multilingual (EN/ES) portfolio using React and TypeScript, featuring a reusable component architecture, serverless contact handling via EmailJS, and Google Analytics 4 integration to monitor user engagement.
- Designed an interactive project gallery with version-controlled releases via GitHub Pages, implementing internationalization with i18Next to demonstrate best front-end development practices and UI/UX design principles.

Room Occupancy Visualization System | Python, JavaScript, Vue.js, HTML/CSS, PostgreSQL August – December 2025

- Collaborated in a 4-member team to develop an IoT system integrating Raspberry Pi endpoints and a Flask backend to process and visualize real-time Wi-Fi scan data as a dynamic heatmap demonstrating foot traffic.
- Led front-end development by implementing modular components and integrating REST APIs verified via Postman, while ensuring application stability by implementing automated end-to-end testing with Playwright.
